

CASITAS MUNICIPAL WATER DISTRICT

HYDROLOGY REPORT WATER YEAR 2016 - 2017

February 23rd, 2018

Prepared by
Jordan Switzer – Engineering Technician

Introduction

Casitas Municipal Water District (CMWD), in cooperation with the Ventura County Watershed Protection District (VCWPD) and the U.S. Geological Service (USGS), collects hydrology data on the Ventura River system. The hydrology data constitutes a valuable asset for developing an understanding of the water resources of the Ventura River system. Since 1981, the CMWD has summarized the data into a series of annual reports. This is an annual report that presents information and data for the 2016 – 2017 Water Year (2017 WY). Data is also presented for the 2017 Calendar Year for comparison to historical data.

Casitas acquired a pre-existing water system in June of 2017 consisting of services to approximately 3,000 customers. Water sources for this system include a well-field which draws from the Ojai Valley Groundwater Basin, located within the San Antonio Creek Watershed, a sub-basin to the Ventura River Watershed. This “Ojai System” has been historically supplemented by surface water deliveries from Casitas Reservoir, particularly in times of drought when aquifers are typically depleted and well production is reduced.

An additional rainfall station located on Ojai’s East End and a San Antonio Creek gaging station has been added to this report to reflect hydrologic conditions within the San Antonio Creek Watershed. A table showing Ojai Water System Sources and Deliveries has also been added to this report. Reporting of the hydrologic aspects of this system may be expanded in the future as more data become available.

Water Year 2016 – 2017 Summarized

The water year is a standard used for reporting hydrological cycles. It begins on October 01 of the preceding year and ends September 30 of the named water year. For this report, the 2017 WY began on October 01, 2016, and ended September 30, 2017.

There are four key elements of collected data that go into this report: 1) rainfall, 2) streamflow conditions, 3) lake storage & systems delivery and 4) ambient air temperatures.

Each of these elements are monitored and recorded by CMWD on a daily basis. The following are brief summaries of the hydrologic characteristics of the 2017 WY.

- **Rainfall** – Rainfall and evaporation data are collected on a daily basis at two stations, one at the Casitas Dam and one at the Lake Casitas Recreational Area. The methods for data collection are standardized for consistency. Rainfall data for Matilija Dam and Thacher School are obtained from VCWPD.

The average of the four rainfall stations was 31.26 inches for the 2017 WY. This is above the long-term average of 24.14 inches and is the first above-average water year since the 2011 WY. Casitas Dam received 31.53 inches while Matilija Dam received 35.46 inches.

The bulk of precipitation fell in the months of January and February, when cumulative monthly rainfall at Casitas Dam was 10.88 and 12.91 inches respectively. The highest daily rainfall was recorded on February 18th, with 7.04 inches of rainfall measured at Casitas Dam.

- **Streamflow Conditions**– Streamflow conditions are assessed by collecting data at key points in the Ventura River system. Gage station locations can be found on the Hydrology Map for the Ventura River System. The above average rainfall along with several storm events contributed to significant run-off within the watershed.

Preliminary data provided by VCWPD indicate discharge from North Fork Matilija Creek totaled 5,036 acre-feet (AF) between October 01, 2016 and August 04, 2017. Discharge from Matilija Dam measured at the Matilija Hot Springs gage totaled 19,746 AF with a peak flow of approximately 5,600 cfs on February 17th, 2017.

Surface flow at the measurement weir of the Robles Fish Passage and Diversion Facility (Robles) was present beginning January 08 and lasted until June 20 of 2017. During that period, 19,003 AF were released downstream with an additional 700 AF of un-gaged flow estimated to have overtopped the Robles Dam and bypass the facility during the February 17th storm event. There were four storm peaks that met the Biological Opinion's parameters to initiate supplemental downstream releases for fish passage: 1) January 20, 2017 – 437 cfs peak Robles inflow, 2) January 22, 2017 – 2,573 cfs, 3) February 06, 2017 – 243 cfs; and 4) February 17, 2017 – 10,000 cfs. Downstream release requirements were met when Robles inflow was sufficient to do so. All flow was released downstream when inflow was less than the required supplemental release.

Diversions to the Casitas Reservoir first began on January 22, 2017. Prior to January 22, all inflow was released downstream to allow for aquifer levels to rise to the extent that would be expected under natural conditions for the time of year and type of year (Trial Operating Criteria for Robles Casitas Diversion Facilities, 1959). The diversion canal was operated for 52 days and 6,091 AF was diverted during the 2017 WY.

Coyote Creek and Santa Ana Creek drainages contribute directly to Lake Casitas storage. A total of 5,381 AF were measured at the Santa Ana Creek gage while 11,404 AF were measured at the Coyote Creek gage for the 2017 WY.

- **Lake Storage & Systems Deliveries** – Water storage volumes for system reservoirs, Casitas Dam and Matilija Dam, were ascertained by the daily recording of the reservoir elevation and applying the elevation number to a storage table for each reservoir.

Lake Casitas Reservoir had a net increase in water storage for the 2017 WY. Lake elevation was 489.00 feet MSL on October 01, 2016 and ended on September 30, 2017 at 493.43 feet MSL, corresponding to 99,853 AF of storage in Lake Casitas at the end of the WY. The reservoir's 4.4-foot increase in elevation resulted in a net gain of 6,389 AF. Storage increased by 22,200 AF during the three-month period of January through March; net monthly storage losses occurred outside of that period.

The CMWD Board of Directors approved the adoption of a new Casitas Reservoir storage rating table prepared by Tetra Tech after completion of a LIDAR and bathymetric study resulting in a re-calculated reservoir capacity of 237,760 acre-feet (down from 254,000 acre-feet). This table was implemented on October 01, 2017 (start of 2018 WY) and Casitas Reservoir storage reported from that date forward will reflect this adjustment.

Water deliveries from the reservoir to the main conveyance system totaled 12,174 AF for the WY. This is down 21% from 2016 and 30% from the average deliveries during the previous 10 years. Mira Monte well production was 157 AF during the 2017 WY. Deliveries within the Ojai Water System totaled 1,563 AF; 1,281 AF of which was sourced from the Ojai System Well-Field with the additional 282 AF coming from water deliveries through the main conveyance system.

Casitas Municipal Water District did not conduct any controlled releases from Matilija Dam nor operate any valves at the dam during the water year. All flow was allowed to spill over the dam for the entire water year. The valves were exercised on November 21, 2017 per the request of the Department of Dam Safety. After several years of non-operation through the direction of the National Marine Fisheries Services due to concerns of downstream biological-impacts, the dam piping is presumably clogged with sediment, and no water was discharged during the exercise.

- **Ambient Air Temperatures** – Data was recorded by CMWD staff at two locations, Casitas Dam and the Lake Casitas Recreation Area. These measurements are made on a daily basis and include the maximum and minimum ambient air temperatures and wind speed. Several temperature records dating back to 1960 were tied or broken during the 2017 calendar year: highest monthly maximum (November for Casitas Dam; July, August, September, October, November, and December for Recreation), and highest monthly average (December for Casitas Dam; July, August, and November for Recreation). The all-time high temperature for Recreation (112° F) was tied on five separate occasions.

Hydrology Stations

The following hydrology stations are operated and maintained by the Casitas Municipal Water District:

Reservoir water surface elevations:

- Casitas Dam

Rainfall and Evaporation Monitoring Stations

- Lake Casitas (Upper) Recreation Area
- Casitas Dam

Streamflow Gaging Stations:

- Matilija Creek at Matilija Hot Springs
- Ventura River near Meiners Oaks
- Robles-Casitas Canal
- Santa Ana Creek near Oak View
- Coyote Creek near Oak View

The following hydrology stations are operated and maintained by other agencies:

Reservoir water surface elevations:

- Matilija Dam – Operated by Ventura County Watershed Protection District.

Rainfall Monitoring Stations

- Matilija Dam – Operated by Ventura County Watershed Protection District.
- Ojai – Thacher School – Operated by Ventura County Watershed Protection District.

Streamflow Gauging Stations:

- Ventura River near Ventura (Foster Park) – USGS service contract
- North Fork Matilija at Matilija Hot Springs– Operated by Ventura County Watershed Protection District.
- San Antonio Creek at Old Creek Rd – Operated by Ventura County Watershed Protection District

Historical Hydrology Period – 1959 through 2017

The historical data has been updated for the reporting period and is presented for the period from 1959 through 2017. The historical data includes summaries for the Casitas Reservoir operation, Robles Diversion, rainfall, and ambient air temperature.

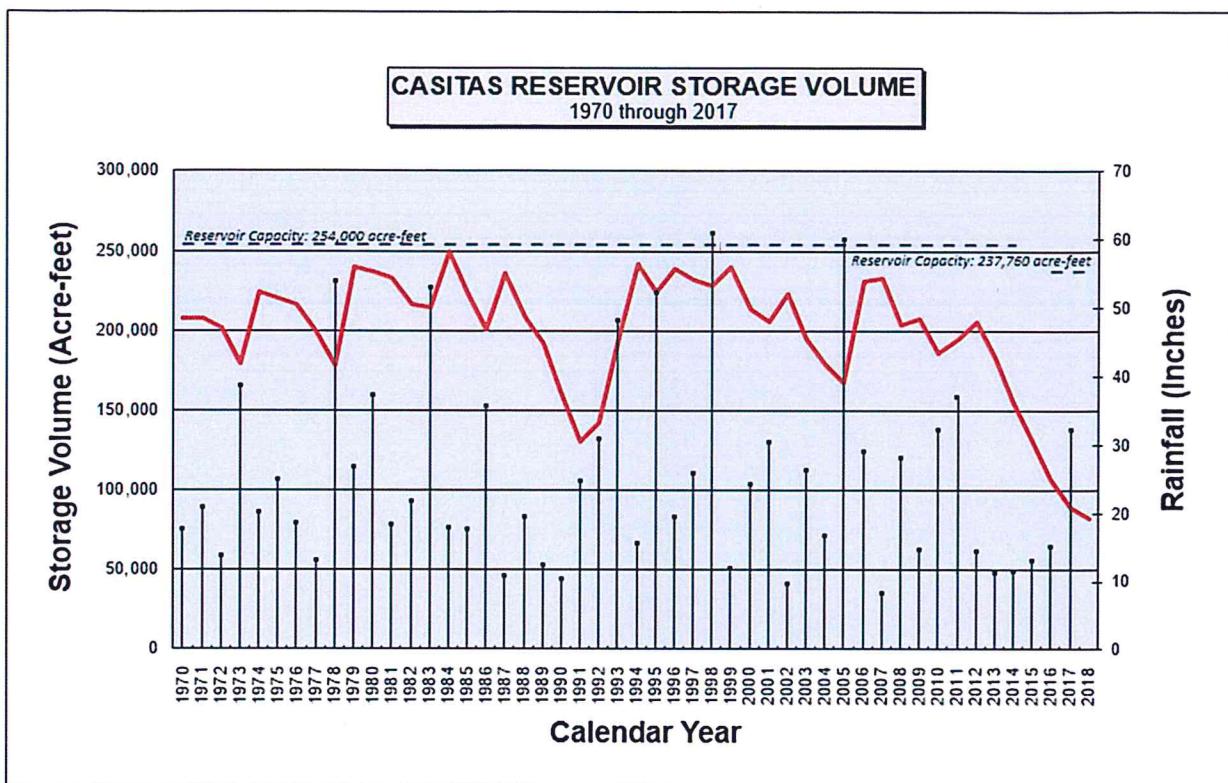

Figure 1. Storage volume, represented by a solid line, is reservoir storage at the start of each calendar year (elevation measured on last day of previous calendar year). Rainfall, represented by data points with drop lines, is the three-station water year average for Casitas Dam, Casitas Recreation and Matilija Dam rain gages. Reservoir volume prior to 1970 (not shown) represents initial filling period after Casitas Dam completion in 1959.

Trends

The historical section of this summary report contains data tables and figures that illustrate trends experienced by CMWD pertaining to rainfall and water use.

Ten-Year Moving Average of Mean Precipitation. The trend presented here is a ten-year moving average of precipitation from 1880 to present (Figure 2). It is created by calculating an average of a water year's three-station average rainfall combined with the previous nine years. The trend has resulted in what appears to be a somewhat sinusoidal curve, illustrating reoccurring periods of wet and dry conditions. From the curve, we may gain an insight on whether we are heading into a wet period or a drought.

The trend indicates that CMWD may be in or at the end of an overall dry period as illustrated by the downward direction of the trendline. Previous downward trends have lasted between 4 and 19 years. It is unknown if the above-average rainfall in WY 2017 marks the end of a 15 year dry period or if it is only a short respite during the ongoing drought. This trend does not guarantee or predict future occurrences.

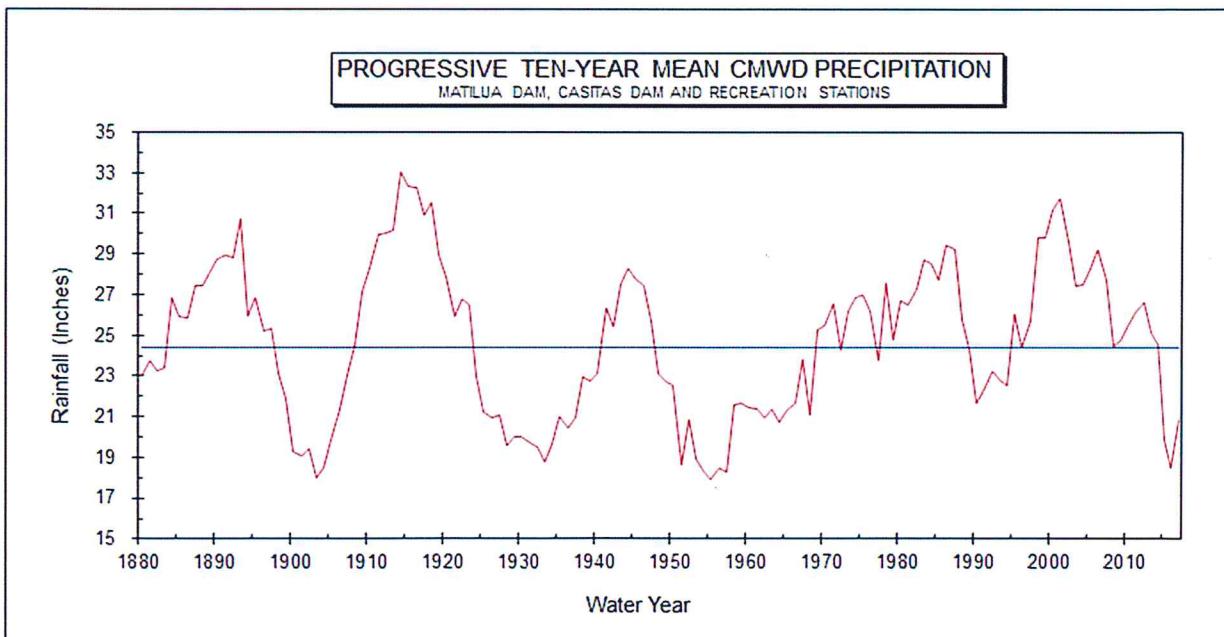

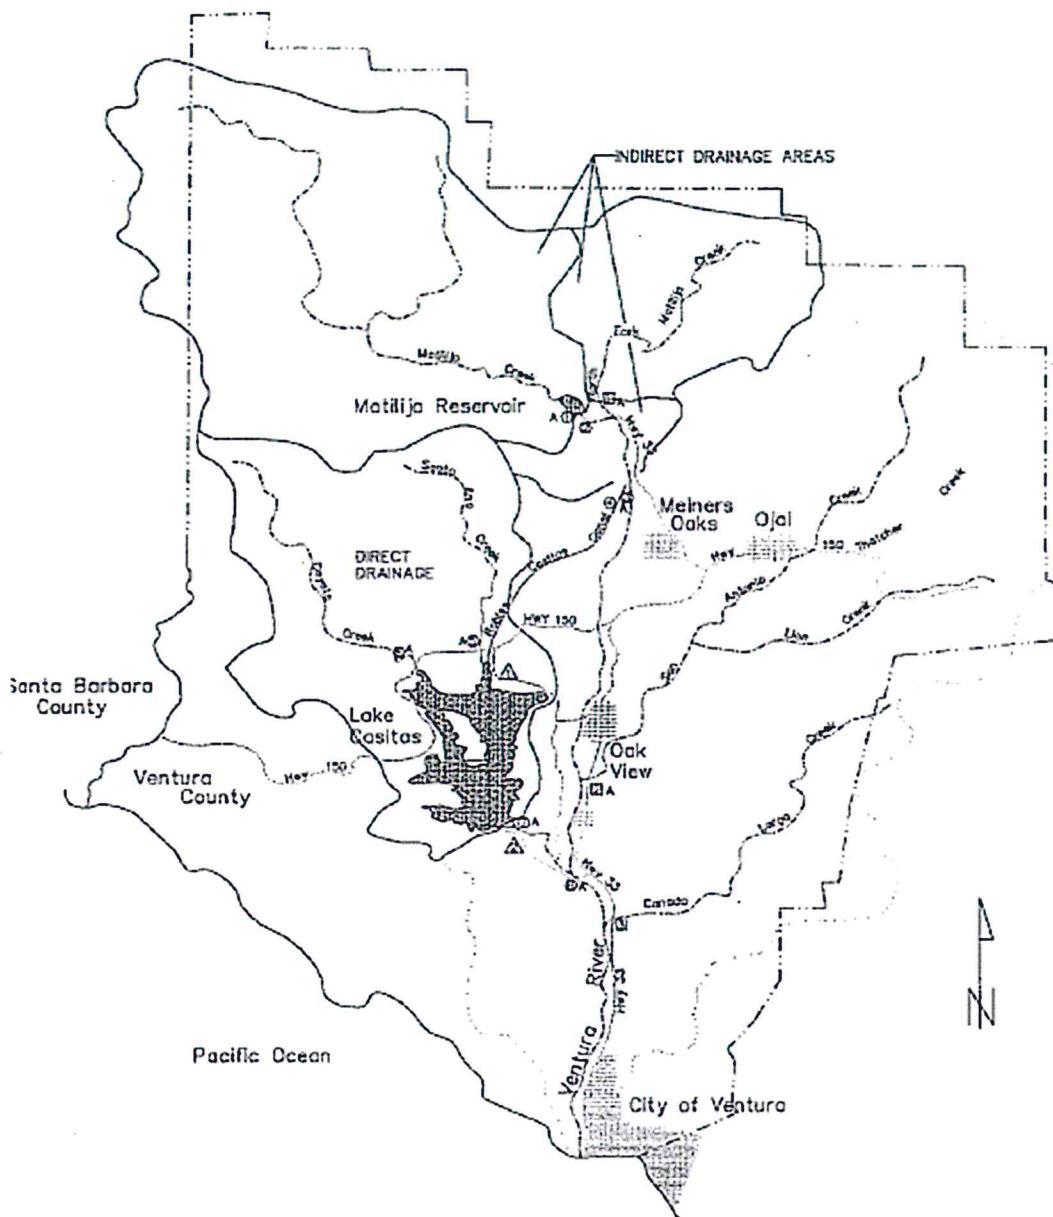

Figure 2. The ten-year moving average is represented by the solid line traversing across the overall average for the period (24.4 inches). Rainfall data for all three stations are available since 1959, rainfall prior to 1959 was assembled using comparable nearby stations and/or correlation factors with other available stations within the watershed.

HYDROLOGY MAP – VENTURA RIVER SYSTEM

DRAINAGE AREAS

ANNUAL HYDROLOGY DATA

Casitas Reservoir Water Inventory Summary

Mira Monte Well Water Production

Ojai System Sources and Deliveries

Reservoir Water Surface Elevations:

- Matilija Dam
- Casitas Dam (listed in Monthly Casitas Reservoir Inventory)

Rainfall Stations:

- Matilija Dam
- Lake Casitas (upper) Recreation Area
- Casitas Dam
- Ojai – Thacher School

Streamflow Gaging Stations:

- Matilija Creek at Matilija Hot Springs
- North Fork Matilija Creek at Matilija Hot Springs
- Ventura River near Meiners Oaks (Robles measurement weir)
- Robles – Casitas Canal
- Ventura River near Ventura (Foster Park)
- Santa Ana Creek near Oak View
- Coyote Creek near Oak View
- San Antonio Creek at Old Creek Rd

HISTORICAL HYDROLOGY DATA

Casitas Reservoir Inventory Annual Summary

- Calendar Year 1959 – Present

Annual Rainfall (Water Year 1959 – Present):

- Matilija Dam
- Lake Casitas (upper) Recreation Area
- Casitas Dam
- Ojai – Thacher School

Monthly Rainfall (Water Year 1960 – Present):

- Lake Casitas (upper) Recreation Area

Ambient Air Temperatures (Calendar Year 1960 – Present):

- Lake Casitas (upper) Recreation Area
- Casitas Dam

Robles – Casitas Canal Monthly Diversions

- Calendar Year 1959 – Present
